Louis,

repeat_region

```
NOTICE: This sequence may not represent the entire insert of this cone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
```

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. This sequence was finished as follows unless otherwise noted:

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
Morbherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5:1:-8 The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the right is RP11-725V3. Actual start of this clone is at base position 1 of RP11-67L14; actual end is at base position 154214 of RP11-67L14.

There are polymorphic base differences in the overlap between RP11-67L14

                                                                                 ò
                               The present sequence is that of human interleukin-1 beta (IL-IB) allele 2 (+6912), which is a form of the IL-IB gene that contains guanine at position 46912, IL-IB allele 1 (+6912) has cytosine at this position (see position 46912 iL-IB allele 1 (+6912) has cytosine at this position (see ALASO174). The invention is based on the identification of this novel allele at marker +6912 of the IL-IB gene. The C to G transition occurs within the 3 untranslated region of the IL-IB gene and results in an increased level of IL-IB protein. Individuals homozygous for the IL-IB allele 2 (+6912) accumulate approximately 4 times more immunoreactive IL-IB protein than homozygotes for IL-IB allele 2 (+6912), and thereby are provided for detecting IL-IB allele 2 (+6912), and thereby disorders, especially coronary artery disease, osteoporosis, nephropathy in diabetes mellitus, alopecia areata, Graves disease, systemic lupus critinopathy, periodontal disease, ulverative colitis, diabetic retinopathy, periodontal disease, juvenile chronic arthritis, psoriasis, insulin dependent diabetes, asthma, chronic inflammatory lung disease, juvenile chronic arthritis, claimed). Identification of the IL-IB allele 2 (+6912) and its involvement in IL-IB overproduction also eables screening assays for involvement in IL-IB overproduction also eables screening assays for involvement in IL-IB overproduction also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB also eables screening assays for involvement in IL-IB and its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes genotyping a nucleic acid sample from a subject to determine at least one allele of an interleukin-1 [IL-1] proinflammatory haplotype. A method has also bee described for determining a subject's susceptibility to developing chronic obstructive airway disease (COAD) or for predicting the rapidity or ultimate progression of a COAD in the subject by: (a) obtaining a nucleic acid sample from the subject, and (b) detecting at least one allele of an IL-1

proinflammatory haplotype in the sample, where detection of at least one of these alleles indicates that the patient has an increased susceptibility to developing COAD. The method is useful for determining the susceptibility of subjects to developing chronic obstructive airway disease or for predicting the rapidity or ultimate progression of chronic obstructive airway disease (COAD). COAD can be asthma, emphysema, chronic bronchicits. The method provides for early identification of chronic obstructive airway disease (COAD), facilitating administration of appropriate treatment at the earliest stage, thereby increasing the probability of a positive outcome. The present sequence represents the human IL-1B gene

The method involves detecting at least one allele of the haplotype, where the presence of the allele indicates that the subject is predisposed to the development or has the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                urinary tract infection; chronic prostatitis; immunological disorder; chronic pelvic pain syndrome; alopecia areata; Grave's disease; thyroid disease; goiter; struma lymphomatosa; sleep disorder; neoplasia; chronic fatigue syndrome; obesity; infectious disease; Leishmaniasis; Leprosy; myocardial disfunction; breast cancer; organ transplant; Hodgkin's disease; hormonal regulation; fertility; septicaemia.

disease or condition. The invention allows the determination of an individual's likelihood for developing a particular disease or condition associated with interleukin 1 (IL-1) polymorphisms without necessarily determining or characterising the causative genetic variation. Diseases such as inflammatory disease e.g. acute joint inflammatory Response (SIRS), Alzheimer's disease, arthritis e.g. acute joint inflammation, juvenile chronic arthritis; asthma e.g. bronchial asthma, chronic obstructive airways disease; cardicovascular diseases e.g atherosclerosis, autoimmune carditis; cardicomyopathy and cardiac cell disfunction e.g. acutic smooth inflammations e.g. inflammatory bowel disease, ulcerative colitis; HIV inflammations e.g. inflammatory bowel disease, ulcerative colitis; HIV inflammations, nephropathy coronary artery lesions; nephropathse e.g. diabetic nephropathy, coronary cartery lesions; nephropathse e.g. diabetic nephropathy, coronary corphalmopathy; osteoporosis e.g. diabetic nephropathy, coronary cophalmopathy; osteoporosis e.g. diabetic nephropathy, coronary coronic simusitis; buyroditis e.g. chronic lung disease; chronic simusitis; buyroditis e.g. chronic lung disease; chronic simusitis; thyroditis e.g. chronic lung disease; chronic simusitis; trauma e.g. carcers e.g. alopecia areato, Graves disease; chronic fatigue syndrome; obesity; infectious diseases e.g. teprosy infectious diseases e.g. teprosy infectious diseases e.g. teprosy corphasias e.g breast cancer, Hodgkin's disease; hermonal regulation e.g. fertility, septicaemia; organ transplants. This allows for a more customised approach to preventing the onset or progression of the disease or condition. The corpicion senders are necessated to preventing the onset or progression of the disease or condition. The preventing the sequence of the human interleukin-18 gene corporated and condition. The preventing the sequence of the human interleukin-18 gene corporations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chromosome 2q13

             The present invention describes a new composition comprising an antisense oligonal eacide (NN) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antionflammacory, antiallergie, and/or antiastimatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired alrways, including lung disease and diseases whose secondary effects affilict the lungs of a subject. They can be used for treating effects affilict the lungs of a subject. They can be used for treating of e.g. ischaemic conditions, pulmonary visconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive could fibrosis, pulmonary hypertension, emphysema, chronic obstructive contensors and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the reduces and prostate cancer. The A-containing ONS break down with the release of decoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA12313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present content on the previously named sequences. SEQ ID No:11 to 1680 (AAA3233 to AAA3392) are specifically claimed ONE from the present invention, on the the invention of one match in the disclosure of the present invention do not match in the interpretation of the present invention of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8524

                                                                      셤
                                                                                                         à
                                                                The present sequence is that of human interleukin-1 beta (IL-IB) allele 1 (+6912), which is a form of the IL-IB gene that contains cytosine at (+6912), which is a form of the IL-IB gene that contains cytosine at (+6912). IL-IB allele 2 (+6912) has guanine at this position (see AAASO175). The invention is based on the identification of this novel allele at marker +6912 of the IL-IB gene and results in an increased level of IL-IB protein. Individuals homozygous for the IL-IB content than homozygotes for IL-IB allele 2 (+6912). Methods and kits are provided for detecting IL-IB allele 2 (+6912), or an allele in a reprovided for detecting IL-IB allele 2 (+6912), or an allele in a reprovided for detecting IL-IB allele 2 (+6912), and thereby a patient's susceptibility to developing inflammatory of disorders, especially coronary areata, Graves disease, systemic lupus in diabetes mellitus, alopecia areata, Graves disease, systemic lupus criming a patient's alopecia areata, Graves disease, systemic lupus crimina dependent disease, ulcerative colitis, diabetic criminatory lung disease, ulcerative colitis, diabetic criminatory lung disease, lung fibrosis, and rheumatory lord carthritis (claimed). Identification of the IL-IB allele 2 (+6912) and its involvement in IL-IB nuckeroduction also eables screening assays for involvement in IL-IB allele 2 (+6912). Transgenic animals are also colaimed, and can be used to identify IL-IB agonists and antagonists, or confirm the safety and efficacy of candidate therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8824

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is provided in a specification relating to a method for determining whether a subject has or is predisposed to develop an interstitial lung disease. The method involves detecting an interleukin-1 receptor antagonist (IL-IRN) (+2018) allele 2, a tumour necroeis alpha (INF-A) (-308) allele 2, or an allele in linkage disequilibrium with either of these two alleles. The method may be used to determine whether a subject has or is predisposed to develop an interstitial pneumonia or a pulmonary fibrosis and other disorders such as rheumatoid arthritis, systemic lupus exythmactosis, Sigoren's syndrome, systemic sclerosis, dermacomyocitis. The method is also used for identifying molecules which can be used as therapeutics for treating interstitial lung disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360

The method comprises detection a restenosis associated allele (RAA) in a nucleic acid sample from the subject, where detection of the RAA indicates that the subject has or is predisposed to battern permits the diagnosis. The restenosis associated allelic pattern permits the diagnosis. The restenosis associated allelic pattern permits the diagnosis of occlusive cardiovascular disorder. The diagnosis allows the most suitable treatment methods for restenosis to be used e.g. selecting therapies for initial vascular stenosis most likely to avoid subsequent stenoses. The detection methods identify restenosis peptidomimetics, agonists and antagonists, (proteins, peptides, peptidomimetics, small molecules or nucleic acids, e.g. anti-sense, ribozyme and triplex nucleic acids) which are used to treat restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosing or determining susceptibility to developing restenosis involves detecting restenosis associated allele in a nucleic acid sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; IL-1A; interleukin-lalpha; IL-1B; interleukin-lbeta; IL-1RN; interleukin-1 receptor antagonist; vasotropic; antiinflammatory; hyporensive; antiooagulant; antilipaemic; arterial restenosis; restenosis associated allele; RAA; occlusive cardiovascular disorder; restenosis detection; ds.

```

lained recurrent pregnancy loss; immunologic reproductive failure; prointerleukin-lbeta; IL-lbeta; human; ds.

(first entry)

```
Evaluating risk of unexplained recurrent pregnancy loss in a subject, testing presence of a variant in interleukin-1 beta promoter region and/or in CD46 gene intron 1 region in a sample obtained from the subject.
                                              Human prointerleukin-1 beta (IL-1 beta) gene.

                                                                                                           The invention relates to a method for evaluating and treating risk of unexplained recurrent pregnancy loss (URPL) in a subject suspected of having immunologic reproductive failure. The method involves testing a sample obtained from the subject for the presence of a variant in the human interleukin-lbeta (IL-lbeta) promoter region, and/or a variant in the CMS gene intron 1 region, where the presence of the variant in indicates an elevated risk of developing recurrent pregnancy loss. The present sequence is human prointerleukin-1 beta (IL-1 beta) gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8405 AACAGAAAGGITITIGAGIACGCITATAGCCIGGACITICCIGIIGICIACAAAGCAATGCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
```

The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonuclectide antisense to the initiation codon, coding region, 5 'or 3' end genomic flanking regions, 5 'and 3' intron-exon junctions, or regions within 2-10 nuclectides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antialeregic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ungiunione or lung surfactant in a subject stissue, or treating bronchoconstriction, lung auffactant in a subject stissue, or treating bronchoconstriction, lung surfactant in a subject stissue, or treating bronchoconstriction.

Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WiPo at the printed specification, but was obtained in electronic format directly from WiPo

rnarmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or ubiquinone.

```
reagent comprising an interactive sensor pair. The detection reagent is useful for monitoring molecular assembly events to permit the dissection of genetic and non-genetic influences on a particular biological activity. The method is useful for linking genetic variations to molecular and physiological events, drug screening, diagnostics, therapy selection and dosing, patient monitoring or environmental safety. The interactive sensor pairs may be used to screen for and identify novel agonists and antagonists or other molecules that modulate a biological activity. The method is also useful for selecting an appropriate targeted therapeutic for a subject having an infection, including viral, bacterial or fungal infection. It is also used in gene therapy. The present sequence is human interleukin-I (IL-1) allelic gene. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              781 ACAGAAGGATATTCAGTGCACATCTGGAACAGGATCAGCTGAAGCACTGCAGGGAGTCAG 840

```

The invention relates to a novel method for determining a subject's susceptibility to the early onset or progression of an ageing-related condition (EOA). The novel method comprises assessing the subject's genotype with respect to at least one allele of an interleukin (IL)-1 pattern 2 and/or pattern 3 (the presence or absence of at least 1 allele provides information about the subject's susceptibility to an early onset or progression of an ageing-related condition). The method is useful for determining or predicting a subject's susceptibility to the stropprosis, osteoperathitis, wrinkled skin, or age-related cancer) and carly onset or progression of an ageing-related condition (e.g. of thermining an ageing-related phenotype. The method may be a customised therapy based on the individual's genetic profile, to tailor a recommended lifestyle, including changes in exercise and diet, and to recommend mutraceuticals that are predicted to benefit a subject having a particular IL-1 genotype and BOA predisposition. This polymucleotide sequence relating to the Disclosure; Fig 5; 98pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of the interleukin-1 beta (II-1B) gene including the upstream promoter region. A novel function-altering polymorphism has been discovered at position -3737 in the distal upstream promoter region. The II-1B (-3737) type 1 allele (C) is associated with increased IL-1B expression and is associated with inflammatory disease. A claimed method of diagnosing an increased likelihood of developing an inflammatory disease or condition associated with increased interleukin production in a subject involves determining the identity of the -3737 IL allele as a type 1 (C) or type 2 (T) promoter sequence. The inflammatory disease is especially a periodontal disease or Alzheimer's disease, or is amylotropic lateral solerosis, arthritis, collagan-induced arthritis, juvenile chronic arthritis, juvenile rheumatorid arthritis, diabetic atthinity, asthma, cardiovascular disease or Alzheimer's diabetic nephropathy, coeliac disease, chronic colitis, diabetic retinopathy, diabetic periodontitis, diabetic retinopathy, diabetic nephropathy, coeliac disease, chronic colitis, diabetic retinopathy, inclammatory bowel disease, chronic colitis, gastric user, hepatic inflammatory bowel disease, nephropathy, neurodegenerative disease, choumatond arthritis, thyroiditis, pulmonary disease, restenosis, rheumatond arthritis, thyroiditis, pulmonary disease, restenosis, rheumatond arthritis, thyroiditis, pulmonary disease, restenosis, chick and Graves disease (all claimed). Determining the identity of the arthritis and disease, with a phermanning the identity and all seconds are all colors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid, useful for preparing a composition for treating an inflammatory disease or condition associated with increased interleukin production in a human subject, e.g. rheumatoid arthritis or ulcerative
                                                                                                                                                                                                                                                                                                      Interleukin-1 beta; IL-1B; human; single nucleotide polymorphism; SNP; antiinflammatory; nootropic; antirheumatic; antiarthritic; cardiant; antiulcer; ophthalmological; antidiabetic; lipolytic; antiasthmatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a new composition comprising an antisense oligomuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary distress such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the release of deoxyadenosine which activates adenosine receptors causing chosen and inflammation, AAA13512 to AAA3512 to epresent the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nuclectide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA33323 to AAA33392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions.

Disclosure; Page 221-227; 1592pp; English

The present invention describes low adenosine (A) content antisense oligonuclectides and compositions (I) comprising them. In the antisense cligonuclectides the A is replaced by a 'Universal' or alternative base. (II) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with ungivespiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, chemokines, endogenously produced specific and non-specific enzymes, chemokines, endogenously produced specific and non-specific enzymes, chemokine receptors, adenosine receptors, bridding proteins, adhesion molecules and their receptors, cytokines and chemokine receptors, adenosine receptors, bridding proteins and enzipheral nervous and non-nervous system certainstiters, defensing and malignancy associated proteins. The antisense oligonucleotides may be used in this way to trast disorders condition selected from pulmonary vasociated proteins and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasociated with a disease or condition selected from pulmonary vasociated with a disease or condition selected from pulmonary vasociated with a disease or condition selected from pulmonary vasociated with a disease or condition selected from pulmonary vasociated by pulmonary disease (CPD), pain, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or the present invention present invention
